

OKAN UNIVERSITY FACULTY OF MEDICINE 2023 – 2024
YEAR III COMMITTEE III (MED326)

PRE-CLINICAL PROFESSIONAL COMPETENCIES COMMITTEE
(6 WEEK /22.04.2024 - 27.05.2024)

COMMITTEE COMPONENTS	TIME	TEACHERS
Introduction to scientific research and Research Proposal Preparation	29	Prof. Dr. Özlem SARIKAYA Prof. Dr. Tuğrul ERBAYDAR
Community-oriented practices and communication skills with special groups	48 (8h/stud)	Prof. Dr. Özlem SARIKAYA Prof. Dr. Tuğrul ERBAYDAR
Ethical Dilemmas in Medicine	5	Asist.Prof. Dr. Hilal EREN GÖZEL
Team building skills	8	Psychologist Irmak ERBAYDAR
O'Talks - Guests of the Week	6	Prof.Dr.Goncagül HAKLAR Asist.Prof.Dr.Hacer Nilbant Special. Psychologist Ebru TOKSOY
Clinical Skills-Simulation	32 (8h/öğrenci)	Prof. Dr. Semih Baskan Asist.Prof. Dr. Rengin ÇETİNGÜVENÇ
TOTAL	129	
SELF STUDY	32	
ELECTIVE COURSES	14	
CUMULATIVE TOTAL	154	

DEAN: Prof.Dr. Selçuk MERCAN

Coordinator: Prof. Dr. Özlem SARIKAYA

Deputy Coordinator: Asist. Prof. Dr.Sercan KAPANCIK, Lect. Doğukan ÖZBEY, Res. Assist. Pınar ULUPINAR

COMMITTEE LEARNING OBJECTIVES

At the end of this Committee, students will;

- Discusses the foundations of scientific research, philosophy of science
- Develop research questions and hypotheses, identify research variables, select appropriate research methods and experience the process of designing a scientific research proposal.
- Presents and discusses a scientific research proposalWork as a team to gain a perception and approach to professional values, experience reflection and feedback processes
- Recognize team dynamics, develop team communication and teamwork skills
- Recognize examples of ethical dilemmas in medicine and develop an ethical approach
- Performs community-based practices and develops communication skills with special groups (elderly-hospices, children, chronic patients and their relatives, etc.)
- Practices history taking and interventional skills in the simulation laboratory

Assessment of Academic Achievement: Learning experiences will be collected in a portfolio file as individual and team products, and clinical skills practices will be evaluated by Objective Clinical Examination (station type skills exam).

***Since the committee program will be carried out in the form of applied activities and student-centered learning methods, attendance will be taken in all lessons and will be the basis for assessment and evaluation.**

Letter to the Course Coordinator

Welcome to “**Pre-Clinical Professional Competencies Committee**” Program.

Are you ready to take new steps to develop the skills you will need to be a successful physician?

The "physician" takes into account the social, cultural and economic structures in which he/she lives and the relations between these structures and society, as well as his/her scientific medical knowledge and skills, in the decisions he/she makes while protecting and improving individual and community health.

The "physician" has a framework that is compassionate, virtuous, just, recognizes and balances ethical dilemmas when his/her own interests conflict with those of his/her patient and family, is a good team member, and uses resources for the benefit of the patient and society.

This program is designed so that you can confidently cross the threshold from the scientific foundations of disease mechanisms and medicine to clinical skills.

The majority of the course consists of small group sessions, team work, clinical simulations and we expect you to use the time off from individual and group activities as an opportunity for independent development.

Please do not hesitate to contact us with your questions and suggestions for the program.

Prof. Dr. Özlem Sarıkaya

1- COMMUNITY-ORIENTED PRACTICE

Aim: The aim of this program component is to enable students to communicate with patients and their relatives waiting in hospital outpatient clinics, students and staff in primary schools, people living in nursing homes, and to develop observation skills related to acute and emergency health problems, chronic diseases, school health and health education, and aging and health problems.

Assessment of Academic Achievement: Attendance to the program will be assessed through reflective journals of learning experiences in the Portfolio file. The contribution of the program component to the committee grade is 15%.

2-FUNDAMENTALS OF SCIENTIFIC STUDY - RESEARCH PROPOSAL

Objective: To experience the processes of designing a scientific research proposal by identifying research questions and hypotheses, selecting observational research methods (descriptive and cross-sectional) related to the research variables, and preparing data collection instruments in order to determine the health problems of the society on the basis of the fundamentals of scientific research and scientific thinking. To present, defend and discuss this research proposal.

Assessment of Academic Achievement: Attendance to the program, adaptation to teamwork (self-evaluation + peer evaluation + supervisor evaluation), research proposal presentation (product evaluation) will be evaluated. The contribution of the program component to the committee grade is 30%.

*Although the meeting times with the research advisors are specified in the programme, it is necessary to make an appointment with the advisor beforehand. Group supervisor meetings can also be scheduled outside the dates specified in the programme.

END OF RESEARCH EVALUATION FORM

(To be filled in by the counsellor)

Dear Teacher,

This evaluation will be made by the supervising faculty member after the research activity is completed and will be used in the calculation of the student's grade in the research proposal preparation component of this committee. We kindly request that the evaluation be made on a single form for each student in the research group according to the following criteria and submitted to the Department of Medical Education.

Performance Evaluation: 0= Unable to observe/Unable to continue
1= Insufficient
2= Needs to be improved
3= Adequate

	1.Öğrenci	2.Öğrenci	3.Öğrenci	4. Öğrenci	5.Öğrenci	6.Öğrenci	7.Öğrenci
Student Name							
Research proposal preparation skills: (identification of hypotheses, literature review, preparation of data collection tools)							
Participation in team work							
Seeking guidance from the trainer							

Other opinions and suggestions:

Name and Surname of the Supervisor Faculty Member:

3-HISTORY TAKING PRACTICES IN SIMULATION LABORATORY

Objective: To practice with learning guides and simulated patients for history taking and communication processes before proceeding to learning practices in the clinical education environment.

Assessment of Academic Success: Continuity in the program, approaching models in the simulation laboratory with a professional identity, skills will be repeated until they reach a sufficient level and will be evaluated using standard guidelines. The contribution of the program component to the committee grade is 20%.

SIMULATED PATIENT HISTORY TAKING LEARNING GUIDE

STUDENT'S NAME, SURNAME/NO : _____/_____/_____ INTERVIEW DATE : _____ ASSESSOR NAME, SURNAME : _____	
1. Needs Improvement : Not applying the step at all, applying it incorrectly or not applying it during the step	
2. Competent : Implementation of the step correctly and in sequence (may need reminding from time to time)	
3. Mastered : Performing the step correctly and in sequence without pausing and without the need for assistance	
NO/Not observed : The step was skipped according to the scenario and/or not observed by the trainer	
SKILLS STEPS	ASSESSMENT
A- WELCOMING THE PATIENT	
Appropriately greeted the applicant/patient	
Introduced himself	
Showed the applicant/patient where to sit	
learnt the name of the applicant/patient and addressed him/her by name	
B- CLINICAL HISTORY TAKING/ANAMNESIS	
Learnt and recorded (age, place of birth, occupation, place of residence) of the applicant/patient	
Asked about the marital status and social status of the patient (marital status and family, education, labour-economic status, housing, etc.)	
Asked questions to learn about the applicant/patient's complaint/reasons for application: <ul style="list-style-type: none"> • Location: (Where? Is it spreading?) • Quality: (How is it?) • Quantity or severity: (How bad is it?) • Timing: (When did it start/start?) • How long does it last? • How often does it come?) • The circumstances in which it occurs, (environmental factors, personal activities, emotional reactions, other conditions that may be related to the illness) Factors that make it better or worse • 	
He learnt the patient's background: <ul style="list-style-type: none"> • Asked about previous illnesses • He asked about his surgeries • He asked about his accidents • Asked about allergies • Habits: smoking, alcohol, drugs, drugs • Drugs used • Asked about body functions (sleep, appetite, excretion, five senses, sexual life, menstrual cycle) 	
<ul style="list-style-type: none"> • Learnt the patient's family history (parents, siblings, children...) [chronic diseases, risk factors, alcohol and substance abuse] 	

<p>C- BODY SYSTEM QUERY</p>	
<p>Asked about features related to</p> <ul style="list-style-type: none"> • Head and neck: He asked about the characteristics related to eyes, ears, nose, and teeth. Asked about the characteristics of the mouth and throat (condition of the teeth, gums, bleeding gums, dentures and suitability, last tooth check, swollen tongue, dry mouth, frequent angina, hoarse voice, etc.). Swelling in the neck, etc. • Breasts (swelling, pain and discomfort, nipple discharge, etc...) • Respiratory system (cough, phlegm, respiratory distress, etc...) • Heart and circulatory system (chest pain, dyspnea, edema, etc...) • Gastrointestinal system. (Difficulty swallowing, burning, appetite, abdominal pain, nausea, vomiting, defecation pattern frequency, stool color, rectal bleeding and tar-colored stools, etc...) • Urinary system (urinary frequency, polyuria, nocturia, burning and pain during urination, hematuria, urinary incontinence, etc.). • Genital system. In male patients; (Hernias, pain or discharge at the head of the penis, testicular pain and masses, sexually transmitted disease history and treatments, sexual orientations, interests, birth control methods, etc...) In the female patient; (Date of first menstruation, menstrual pattern, frequency, length; amount of bleeding, bleeding between periods or after intercourse, dysmenorrhea, premenstrual tension; age at menopause, menopausal symptoms, postmenopausal bleeding, pain, swelling, sexually transmitted diseases and their treatments. Number of pregnancies, number and type of births, miscarriages and abortions, pregnancy complications, contraceptive methods, other problems such as dyspareunia, etc.) • Peripheral veins (intermittent claudication, leg cramps, varicose veins, old vein occlusions, etc...) • Musculoskeletal system. (Muscle and joint pain, stiffness, arthritis, gout, low back pain. (Swelling, redness, pain, tenderness, stiffness, weakness, limitation of movement and activity, etc.). • Neurological system (fainting, blackouts, convulsions, weakness, paralysis, numbness and loss of sensation, tingling, tremors and other involuntary movements etc...) • Hematological system (anemia, easy bleeding and bruising, old transfusions and reactions to them, etc...) • Endocrine system. (Thyroid problems, intolerance to heat and cold, excessive sweating, excessive thirst and hunger, polyuria, etc...) • Psychosomatic features (nervousness, tension, mood [including depression], memory, etc...) 	
<p>D- TERMINATING THE INTERVIEW</p>	
<p>Summarised the information obtained from the applicant/patient to the patient and his/her relatives.</p>	
<p>Allowed the applicant/patient to provide additional explanations.</p>	
<p>He/she learnt whether the applicant/patient had any questions and Informed the applicant/patient about the next steps.</p>	
<p>Finished the history taking in a polite manner and invited the applicant/patient to be examined.</p>	
<p>E- COMMUNICATION SKILLS DURING THE INTERVIEW</p>	
<p>Established and maintained eye contact with the applicant/patient throughout the interview</p>	
<p>addressed the applicant/patient by name in a respectful manner throughout the interview</p>	
<p>Facilitated the applicant/patient's speech ("Yes, hmm, yes", etc., showing that he/she is listening by nodding).</p>	
<p>Listened to the applicant/patient without interrupting and took notes. Showed interest in the applicant/patient's narration (active listening)</p>	
<p>The applicant/patient was not engaged in other work during the interview.</p>	
<p>Used a language that the applicant/patient would understand.</p>	

4-INTERVENTIONAL SKILLS APPLICATIONS

Objective: To acquire history taking, physical examination and some generic skills through simulated patients and models in the preclinical period. Intravenous venipuncture/blood collection, nasogastric catheter insertion/urinary catheter insertion and suturing, which are skills acquired during the third year, are revisited in this committee with a competency-based learning approach.

Assessment of Academic Achievement: Program attendance, approaching models in the simulation laboratory with a professional identity, skills will be repeated until they reach a sufficient level and will be evaluated using standard guidelines. The contribution of the program component to the committee grade is 15%.

Check-list 1/ Nasogastric Tube Insertion

1	Explain the procedure; secure patient's privacy; prepare equipment; wash hands.	
2	Elevate head of bed to highest position; place pillow behind shoulders; work on right side if right-handed, and vice versa.	
3	Examine tubing for rough or sharp edges.	
4	Measure tubing and mark with tape or ink.	
5	Remove patient's eye-glasses or dentures.	
6	Place a towel over chest, have emesis basin available.	
7	Check patency of nostrils with flashlight, select most patent nostril.	
8	Lubricate the distal 10-15 cm of the tube with water-soluble lubricant; avoid filling the holes by lubricant.	
9	Arrange with patient for a signal to indicate a need for a rest during procedure. Give patient tissues and a glass of water.	
10	Have patient hyperextended neck slightly. With curved end pointing downward, slowly and gently insert tube into nostril, directing it downward and toward ear. Do not force; try other nostril if there is resistance. Rotate tube 180 degrees while advancing it to the pharynx.	
11	Allow patient to rest briefly after tube reaches oropharynx.	
12	Have patient flex neck and take big swallows of water, with each swallow advance tube until previously marked point is reached.	
13	Check tube placement; observe for cyanosis, choking, coughing	
14	Place a stethoscope over epigastric area. Insert 10-15 ml of air with syringe and listen for sound of air entering stomach.	
15	If in doubt about placement, ask patient to talk; look in back of mouth, and throat with flashlight to see if tubing is curled up there; or request to confirm placement with X-ray.	
16	Clamp or plump tube	
17	Anchor tubing in place, avoiding pressure on external naris.	
18	Return client to position of comfort; explain expected sensations in throat, fluid restrictions, and use of ice or other palliative measures; wash hands.	

Check-list 2/ Insertion of a Urinary Catheter (female)

1	Explain procedure	
2	Place a female in a dorsal recumbent position	
3	Drape the patient with a bath blanket for privacy and warmth	
4	Position external light source to focus on perineum and meatus	
5	Work from the side of the bed that puts your dominant hand toward the foot of the bed	
6	Have your assistant stand on the opposite side	
7	Wash perineal area with soap and water	
8	Place the catheterization material between the patient's legs about 45cm from the perineal area	
9	Check the material package	
10	Securely connect the collection bag and tube connector	
11	Place a drape under the patient's buttocks	
12	Use a clean glove to separate the labia and check the visibility of the meatus	
13	Put on sterile gloves	
14	Pour the antiseptic on the sterile absorbent gas	
15	Test the balloon inflation	
16	Lubricate the catheter	
17	Separate the labia with the non-dominant hand	
18	Use forceps to cleanse labia and meatus with absorbent gas	
19	Cleanse from anterior to posterior with one stroke per gas ending with meatus	
20	Once the labia have been cleansed, they must be hold apart with the help of a sterile absorbent gas, until the catheter is inserted	
21	Insert the catheter with dominant hand slowly and gently, slightly downward to follow the natural curve of the urethra until urine flows (total depth 5 to 7.5 cm)	
22	Release labia and hold catheter in place firmly	
23	Inflate the balloon by inserting <10ml fluid with a prefilled syringe	
24	Tug gently on the catheter to be sure it is in place securely	
25	Secure the catheter to the leg or abdomen	
26	Remove the equipment, clean and dry the perineum and return the patient to a comfortable position	
27	Position drainage bag and tubing correctly	

Check-list 3/ Urinary catheterization (male)

1	Explain procedure	
2	Place a male in in a supine position with the legs together or slightly apart.	
3	Fold the top linen down to the middle of his thighs and drape him for privacy and warmth.	
4	Work from side of bed that places your dominant hand toward the patient's feet.	
5	Have your assistant stand on the opposite side.	
6	Wash perineal area with soap and water.	
7	Place the catheterization material on the bed beside his knees or on the overbed table positioned across his knees.	
8	Material bundle should include a pens, sterile lubricant, antiseptic solution, sterile gas, a tray and a sterile drape to lye under the patient, and should provide a sterile area once opened.	
9	Position collection bag and tubing connector safely either connecting one to the other safely or putting the end part of the tube in a tray.	
10	Place a sterile drape over the patient's legs just below the penis.	
11	Put on sterile gloves	
12	Pour the antiseptic on the sterile absorbent gas	
13	Test the balloon inflation	
14	Lubricate the catheter	
15	Hold the absorbent gas with the forceps and cleanse the head of penis and meatus with circular strokes from meatus outward.	
16	Once the non dominant hand holds the penis it is contaminated and must not be returned to the sterile area, all sterile equipment must be handled only with the other hand.	
17	Once the penis has been cleansed, the foreskin must be hold apart with the help of a sterile absorbent gas, until the catheter is inserted	
18	Stretch the penis upright, at a right angle to the abdomen, and direct the catheter straight downward.	
19	If you encounter resistance do not force the catheter, rotate it, wait briefly and ask the patient to take a deep breath, which usually relaxes the urethral sphincters.	
20	Insert the catheter until urine flows (total depth of 18 to 20 cm.)	
21	Inflate the balloon by inserting <10ml fluid with a prefilled syringe.	
22	Tug gently on the catheter to be sure it is in place securely.	
23	Secure the catheter to the leg or abdomen.	
24	Remove the equipment, clean and dry the perineum and return the patient to a comfortable position.	
25	Position drainage bag and tubing correctly.	

5- TEAM BUILDING, COLLABORATING AND REFLECTIVE PRACTICE PROCESSES

Objective: To work in teams to gain a perception and approach to professional values, to recognize and manage team dynamics, to develop team communication and teamwork skills, to experience reflection and feedback processes.

Evaluation of Academic Achievement: Attendance, active participation and reflective report on the experience will be evaluated. The contribution of the program component to the committee grade is 10%.

6- ETHICAL DILEMMAS IN MEDICINE

Objective: To recognize the factors and different approaches that shape ethical decision-making through cases exemplifying **cancer** pathogenesis and gene classes, to evaluate examples of ethical approaches in sample medical cases involving ethical dilemmas, and to present and discuss them verbally.

Assessment of Academic Achievement: Attendance, active participation and ethical evaluation homework will be evaluated. The contribution of the program component to the committee grade is 10%.
