**COMMITTEE LEARNING OBJECTIVES**

**At the end of this Committee, students will be able to;**

- Discusses the general characteristics of the endocrine system, its effect on metabolic processes and explains the irregularities in endocrine processes together with the clinical problems that may arise,
- Understands the morphologic and pathophysiologic changes of endocrine and urogenital system diseases
- Describe neoplastic tissue changes in common cancers of the endocrine and urogenital systems
- Discuss ethical issues in endocrine diseases and evaluates patients and their relatives in terms of ethical context
- Understands pathologic tissue changes in clinical problems and diseases involving the urogenital system
- Describe pathologic conditions in male and female reproductive systems and the problems they may cause
- Describe the basic morphologic and pathologic changes in glomerular and cystic diseases of the urinary system
- Explain the pathophysiology, diagnosis and treatment approach of acute and chronic renal failure,
- Explains the pathophysiology of diabetes mellitus, lists the types of DM, explains the diagnosis and treatment approach
- Recognize obstetric and gynecologic emergencies, explain diagnosis and treatment methods
- Explains the methods of fertility regulation, pregnancy physiology and pregnancy process
- Explains the effects, mechanisms of action, side effects and drug interactions of drugs used in endocrine and urogenital system diseases.
- In research project, the student applies to the Non-Interventional Ethics Committee by preparing the form and monitors the evaluation
- Practices to gain some basic clinical skills in the simulation center and skills laboratory.
