COMMITTEE LEARNING OBJECTIVES**At the end of this course, the student will be able to:**

- Defines the anatomical composition and functions of the nervous system.
- Defines the anatomical composition and functions of the musculoskeletal system.
- Describes human behaviors and mental activities.
- Explains the pathology and histopathological findings of nervous, muscular, and skeletal system diseases.
- Understands and applies examination methods in clinical neurology, psychiatry, orthopedics, and physical therapy and rehabilitation, develops an approach to diagnoses, and interprets basic biochemical and radiological examination results.
- Develops a diagnostic approach to pathophysiological and histopathological changes and interprets basic pathological results.
- Takes and interprets anthropometric measurements used in monitoring the growth and development of children.
- Performs basic diagnosis and treatment management of musculoskeletal system diseases.
- Explains the pathophysiological mechanisms and histopathological findings of common nervous system diseases.
- Explains the mechanisms of action, side effects, dose-response relationships, and drug interactions of pharmacological agents related to the central nervous system.
- Understands the fundamental principles and process of doctor-patient communication in the simulation center and skills laboratory and organizes the interview.
- Conducts communication skills practices and standardized patient interviews in the simulation center and skills laboratory.
- Collects research data approved by the Ethics Committee in the process of student research projects
