OKAN UNIVERSITY

Istanbul Okan University Master's Program in Architecture

Program: Architecture and Construction Sector shows important developments in our country and in the world. There has been great progress made in building sector, which provides the needs of growing world population like sheltering, production, management, education, energy, transportation and trade. The sector in our country takes an important place in the world. On the other hand, the attention to prestigious buildings that have got quantitatively and qualitatively high value has been increased. This requires master architects who developed research and art skills, and have got postgraduate degrees. Alongside, it is now a must to educate professionals who can speak languages within the scope of globalization. Our postgraduate program aims to educate architects both in construction and in education sectors by answering the needs defined above. Architecture Master's Degree Program aims to give expertise in modern and leading architecture. Another goal of the program is to motivate undergraduates to get prepared to the PhD program.
