ISTANBUL OKAN UNIVERSITY BUSINESS CONTINUITY POLICY

Business Continuity Policy is the implementation principles specified in the ISO 22301 Business Continuity Management Standard are carried out within the scope of law and regulatory obligations. The main purpose of the Business Continuity Management Policy is to make the critical processes and assets determined by business impact analysis functional in a predetermined minimum period of time in case of any interruption.

• Ensuring life safety as the first priority in disasters and emergencies,

• Continuously improving our business continuity capacity in accordance with the ISO 22301 international standard,

• Reducing the incidents and accidents that may interrupt our services, to ensure that the incidents are overcome with the least damage and to continue our services uninterruptedly,

• Ensuring the safety of human life, to prevent or to keep to a minimum the events and effects that may cause business continuity interruption, in all possible extraordinary situations, within the framework of continuous improvement in accordance with national, international standards and legal conditions,

• Evaluating the dimensions of the disaster/crisis/incident in the fastest and most accurate way and to ensure that the necessary actions are taken quickly,

• Increasing the speed of intervention and quickness at decision points,

• Managing risks and developments that may cause loss of reputation,

• Preventing disasters that can be evitable with protective measures by carrying out Risk Assessment studies for critical services,

• Making relevant plans for the development of business continuity solutions for critical services in line with the objectives of the organization and for the recovery of critical services at acceptable times and levels,

• We undertake to centrally coordinate the preparatory work of crisis, business recovery, and emergency management activities related to business continuity.
